### ***ELECTION***

Applicant's election of Claims 1-3 and 14-17 in Paper No. 7 is acknowledged.

### ***RESTRICTION REQUIREMENT***

The following further restriction to one of the inventions is required under 35 U.S.C. 121:

**Group I. Claims 21-27 and 79**, drawn to a method of making and filling an ampoule, classified in Class 53, subclass 462.

**Group II. Claims 101 and 102**, drawn to a method of forming an ampoule, classified in Class 493.

**Claim 28**, being a product claim, is grouped with the product claims of Group I of the last Office action.

The inventions are distinct, each from the other, because of the following reasons:

The inventions of Groups I and II of this Office action are related as **combination and subcombination**. A restriction requirement is based on the presumption that all claims of record define patentable inventions. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for its presumed patentability and (2) that the subcombination has utility by itself or in other combinations. (See MPEP 806.06(c)). In the instant case, a comparison of combination claim 1 and subcombination claim 101 provides evidence that the combination, as claimed, does not require the particulars of the subcombination, as claimed, for its presumed patentability. Subcombination claim 101 sets forth the heat treatment of the barrel and its subsequent handling. Combination claim 21 does not set forth these particulars and, consequently, does not require them for patentability. Even if other combination claims *do* set forth these particulars,

distinction between the *inventions* is shown if any one combination claim does not include the particulars of any one subcombination claim. The presence of the particulars in other combination claims indicates that they *may be* included as part of the combination, but the claims selected above provide evidence that the particulars are not *required*. (See MPEP 806.05(c), Example 3.) The subcombination has separate utility because it can be used in operations without the rest of the combination.

Because these inventions are distinct for the reasons given above, and because they have acquired a separate status in the art as shown by their different classifications, restriction for examination purposes, as indicated, is proper.

Applicant is advised that the response to this requirement, to be complete, must include an election of the invention to be examined even if the restriction requirement is traversed.

Applicant is reminded that, upon cancellation of claims to a non-elected invention, the **inventorship must be amended** in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a diligently filed petition under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(h). Applicant should further **amend the title**, in necessary, to reflect the elected invention.

Any inquiry concerning this communication should be directed to **Examiner John Sipos** at telephone number **(703) 308-1882**. The examiner can normally be reached from 6:30 AM to 5:00 PM Monday through Thursday.
